

AC 11/05/2017
Item No. 4.187A

UNIVERSITY OF MUMBAI

Revised syllabus (Rev- 2016) from Academic Year 2016 -17
Under

FACULTY OF TECHNOLOGY

Instrumentation Engineering

Second Year with Effect from AY 2017-18

Third Year with Effect from AY 2018-19

Final Year with Effect from AY 2019-20

As per **Choice Based Credit and Grading System**
with effect from the AY 2016–17

From Co-coordinator's Desk:

To meet the challenge of ensuring excellence in engineering education, the issue of quality needs to be addressed, debated, and taken forward in a systematic manner. Accreditation is the principal means of quality assurance in higher education. The major emphasis of accreditation process is to measure the outcomes of the program that is being accredited. In line with this Faculty of Technology of University of Mumbai, has taken a lead in incorporating philosophy of outcome based education in the process of curriculum development.

Faculty of Technology, University of Mumbai, in one of its meeting unanimously resolved that, each Board of Studies shall prepare some Program Educational Objectives (PEO's) and give freedom to affiliated Institutes to add few (PEO's), course objectives and course outcomes to be clearly defined for each course, so that all faculty members in affiliated institutes understand the depth and approach of course to be taught, which will enhance learner's learning process. It was also resolved that, maximum senior faculty from colleges and experts from industry to be involved while revising the curriculum. I am happy to state that, each Board of Studies has adhered to the resolutions passed by Faculty of Technology, and developed curriculum accordingly. In addition to outcome based education, **Choice Based Credit and Grading System** is also introduced to ensure quality of engineering education.

Choice Based Credit and Grading System enable a much-required shift in focus from teacher-centric to learner-centric education. Since the workload estimated is based on the investment of time in learning, not in teaching. It also focuses on continuous evaluation which will enhance the quality of education. University of Mumbai has taken a lead in implementing the system through its affiliated Institutes. Faculty of Technology has devised a transparent credit assignment policy adopted ten points scale to grade learner's performance. **Choice Based Credit and Grading System** were implemented for First Year of Engineering (Undergraduate) from the academic year 2016-2017. Subsequently this system will be carried forward for Second Year of Engineering (Undergraduate) in the academic year 2017-2018 and so on.

Dr. Suresh K. Ukarande
Coordinator,
Faculty of Technology,
Member - Academic Council
University of Mumbai, Mumbai

Preamble:

The overall technical education in our country is changing rapidly in manifolds. Now it is very much challenging to maintain the quality of education with its rate of expansion. To meet present requirement a systematic approach is necessary to build the strong technical base with the quality. Accreditation will provide the quality assurance in higher education and to achieve recognition of the institution or program meeting certain specified standards. The main-focus of an accreditation process is to measure the program outcomes, essentially a range of skills and knowledge that a student will have at the time of graduation from the program that is being accredited. Faculty of Technology of University of Mumbai has taken a lead in incorporating philosophy of outcome based education in the process of curriculum development.

I, as a Chairman, Board of Studies in Instrumentation Engineering of University of Mumbai, happy to state here that, Program Educational Objectives (PEOs) were finalized for undergraduate program in Instrumentation Engineering, more than ten senior faculty members from the different institutes affiliated to University of Mumbai were actively participated in this process. Few PEOs and POs of undergraduate program in Instrumentation Engineering are listed below;

Program Educational Objectives (PEOs)

- *Graduates will have successful career in industry or pursue higher studies to meet future challenges of technological development.*
- *Graduates will develop analytical and logical skills that enable them to analyze and design Instrumentation and Control Systems.*
- *Graduates will achieve professional skills to expose themselves by giving an opportunity as an individual as well as team.*
- *Graduates will undertake research activities in emerging multidisciplinary fields.*

Program Outcomes (POs)

- **Engineering knowledge:** Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- **Problem analysis:** Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- **Design/development of solutions:** Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- **Conduct investigations of complex problems:** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- **Modern tool usage:** Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

- **The engineer and society:** Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
- **Environment and sustainability:** Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
- **Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
- **Individual and team work:** Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
- **Communication:** Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
- **Project management and finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
- **Life-long learning:** Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Dr. S. R. Deore,
Chairman,
Board of Studies in Electrical Engineering,
Member - Academic Council
University of Mumbai

Course objectives	<ol style="list-style-type: none"> To build the strong foundation in Mathematics of students needed for the field of Instrumentation Engineering. To provide students with mathematics fundamentals necessary to formulate, solve and analyses complex engineering problems. To prepare student to apply reasoning informed by the contextual knowledge to engineering practice. To provide opportunity for students to work as part of teams on multi-disciplinary projects 	
Course Outcomes	<p>The students will be able to –</p> <ol style="list-style-type: none"> Demonstrate basic knowledge of Laplace Transform. Obtain the time response of systems using inverse Laplace transform. Find the Fourier series, Complex form of Fourier series, Fourier Integral and Fourier transform of the functions. Study the differential vector algebra and its properties. Study vector line integral and theorems in plane and surface. Check for analytical functions and find the analytical function and study the mapping. 	

Details of Syllabus:

Prerequisite: Knowledge of Matrix algebra, Differentiation, Integration, Probability, and Series expansion.

Module	Contents	Hrs.	CO mapping
1	<p>Laplace Transform Laplace Transform (LT) of Standard Functions: Definition of Laplace transform, Condition of Existence of Laplace transform, Laplace transform of e^{at}, e^{-at}, $\cos at$, $\sin at$, $\cos bt$, $\sin bt$ (No Proof of formulas), Heaviside unit step function, Dirac-delta function (No Proof of formula), Laplace transform of Periodic function (Proof of formula) Properties of Laplace Transform: Linearity, first shifting theorem, second shifting theorem multiplication by t^n, Division by t, Laplace Transform of derivatives and integrals, change of scale, convolution theorem, Evaluation of integrals using Laplace transform. (No proof of any property)</p>	8	CO1
2	<p>Inverse Laplace Transform: Partial fraction method, Method of convolution, Laplace inverse by derivative Applications of Laplace Transform: Solution of ordinary differential equations, Solving RLC circuit differential equation using Laplace transform of first order and second order only (not framing of differential equation)</p>	5	CO2
3	<p>Fourier Series Introduction: orthogonal and orthonormal set of functions, Definition, Dirichlet's conditions, Euler's formulae Fourier Series of Functions: Exponential, trigonometric functions of any period $=2L$, even and odd functions, half range sine and cosine series Complex form of Fourier series, Fourier integral representation, Fourier Transform and Inverse Fourier transform of constant and Exponential function, Fourier sine and cosine transform of Exponential, sine and cosine function</p>	12	CO3
4	<p>Vector Algebra Scalar and Vector Product: Scalar and vector product of three and four vectors and their properties (Only introduction, No question to be asked) Vector Differentiation: Gradient of scalar point function, divergence and curl of vector point function Properties: Solenoidal and irrotational vector fields, conservative vector field</p>	7	CO4
5	<p>Vector Integral: Line integral Green's theorem in a plane (Verification question can be asked), Gauss' divergence theorem and Stokes' theorem (No question on Verification to be asked)</p>	6	CO5

6	<p>Complex Variable Analytic Function: Necessary and sufficient conditions (No Proof), Cauchy Reiman equation Cartesian form (No Proof) Cauchy Reiman Equation in polar form (with Proof), Milne Thomson Method and its application, Harmonic function, orthogonal trajectories Mapping: Conformal mapping, bilinear transformations, cross ratio, fixed points, bilinear transformation of straight lines and circles</p>	10	CO6
---	---	----	-----

Internal Assessment:

Internal Assessment consists of two tests out of which, one should be compulsory class test (on minimum 02 Modules) and the other is either a class test or assignment on live problems or course project.

Theory Examination:

1. Question paper will comprise of 6 questions, each carrying 20 Marks.
2. Total 4 questions need to be solved.
3. Question No. 1 will be compulsory and based on entire syllabus wherein sub questions of 4 to 5 marks will be asked.
4. Remaining questions will be mixed in nature.
5. In question paper weightage of each module will be proportional to number of respective lecture hours as mentioned in the syllabus.

Term Work:

Term work shall consist of minimum three simulations and four tutorials from the above list. The distribution of marks for term work shall be as follows:

- | | |
|--------------------------------------|------------|
| Laboratory work (Tutorials) | : 10 Marks |
| Laboratory work (programs / journal) | : 10 Marks |
| Attendance | : 5 Marks |

The final certification and acceptance of term work ensures the satisfactory performance of laboratory work and minimum passing in the term work.

Course Objectives	<ol style="list-style-type: none"> To familiarize the student with basic electronic devices and circuits. To provide understanding of operation of diodes, bipolar and MOS transistors, DC biasing circuits, Transistors as switching device, Power circuits and systems. To introduce the students the basic properties of OpAmp, analysis and design of electronic circuits using OpAmp 	
Course Outcomes	<p>Students will be able to</p> <ol style="list-style-type: none"> Explain working of Diode and Zener diode and its applications Analyze, simulate, and design amplifiers using BJT biasing techniques, frequency response. Analyze circuits using MOSFET. Explain power amplifiers and power supply. Explain op-amp parameters Design various circuits using operational amplifiers. 	

Details of Syllabus:

Prerequisite: Knowledge of semiconductor theory.

Module	Contents	Hrs.	CO mapping
1	P-N Junctions diode PN Junction diode small signal model, p-n junction under forward bias and reverse bias conditions, Rectifier Circuits, Clipping and Clamping circuits, Zener diode and its applications.	4	CO1
2	Bipolar Junction Transistors (BJTs) Physical structure and operation modes, Active region operation of transistor, D.C. analysis of transistor circuits Biasing the BJT: Different type of biasing circuit and their analysis. Bias stability, Thermistor compensation, thermal runaway. Basic BJT amplifier configuration, Transistor as a switch. High frequency model of BJT amplifier. Effect of positive and negative feedback, advantages of negative feedback, Feedback Connection Type.	11	CO2
3	Field Effect Transistor (FET) Junction FET, its working and VI characteristic. Enhancement-type MOSFET: structure and physical operation,	11	CO3

	current voltage characteristics. Depletion-type MOSFET, JFET and MOSFET as an amplifier. Biasing in JFET and MOSFET amplifiers. Basic JFET and MOSFET amplifier configuration: common source, common gate and common drain types. High frequency model of FET, Low and High frequency response of common source amplifier.		
4	Power Amplifiers Class A large signal amplifiers, Harmonic distortion, Transformer coupled audio power amplifier, Class B amplifier, Class AB operation, Power BJTs, Regulated power supplies, Series voltage regulator.	6	CO4
5	Operation Amplifier (Op-amps) Ideal Op-amp. Op-amp characteristics, Op-amp feedback analysis.	4	CO5
6	Applications of Op-amp. Practical op-amp circuits: inverting amplifier, non-inverting amplifier, weighted Summation circuit, summation, subtractor, integrator, differentiator. Large signal operation of op-amps. Instrumentation amplifier. Active filters, Op-amp as V to I and I to V converter, logarithmic amplifiers, waveform generators, Schmitt triggers, comparators. Oscillators: Introduction, Condition for Oscillation, RC phase shift, Weinbridge, Hartley, Colpitts and Crystal controlled oscillator.	12	CO6

Course objectives	<ol style="list-style-type: none"> 1. To provide an understanding of the principles of digital electronics and use of number systems 2. To give knowledge about combinational circuits, 3. To describe working and design methods of sequential circuits. 4. To familiarize with the basics of asynchronous sequential circuits and design techniques. 5. To provide understanding of memory devices and state machines. 6. To make the students understand basic logic families and their applications. 	
Course Outcomes	Students will be able to- <ol style="list-style-type: none"> 1. Represent numerical values in various number systems and perform number conversions between different number systems. 2. Explain operation of logic gates using IEEE/ANSI standard symbols. Analyze and design, digital combinational circuits. 3. Analyze and design, sequential logic circuits. 4. Analyze and design, asynchronous sequential logic circuits. 5. Explain nomenclature and technology in memory devices. 6. Analyze logic families and their application to design the digital system. 	

Details of Syllabus:

Prerequisite: Knowledge of number systems and boolean logic

Module	Topic	Hrs.	CO Mapping
1.	NUMBER SYSTEMS: Binary, Octal, Decimal, Hexadecimal-Number base conversions, complements, signed Binary numbers. Binary Arithmetic- Binary codes: Weighted, BCD, 8421, Gray code, Excess 3 code, ASCII, Error detecting code, code conversion from one code to another Boolean laws, De-Morgan's Theorem, Principle of Duality, Boolean expression, Boolean function, Minimization of Boolean expressions, Sum of Products (SOP), Product of Sums (POS), Minterm, Maxterm, Karnaugh map Minimization, Don't care conditions.	08	CO1
2.	COMBINATIONAL CIRCUITS: LOGIC GATES: AND, OR, NOT, NAND, NOR, Exclusive,	12	CO2

	OR and Exclusive NOR, Implementations of Logic Functions using gates, NAND, NOR implementations, Multi level gate implementations, Multi output gate implementations. Design of combinational circuits, Adders-Subtractors – Serial adder/ Subtractor - Parallel adder/ Subtractor, look ahead carry generator, BCD adder, Magnitude Comparator, Multiplexer/ Demultiplexer, encoder / decoder, parity checker, code converters. Implementation of combinational logic using MUX, DEMUX.		
3.	SEQUENTIAL LOGIC CIRCUITS Flip flops- SR, D and Master slave JK, T, Characteristic table and equation, Edge triggering, Level Triggering, Realization of one flip flop using other flip flops, Asynchronous / Ripple counters, Synchronous counters, Modulo n counter, shift registers, Universal shift register and its applications, Serial to parallel and parallel to serial converter.	12	CO3
4.	ASYNCHRONOUS SEQUENTIAL CIRCUITS Design of fundamental mode and pulse mode circuits – primitive state / flow table, Minimization of primitive state table, state assignment, Excitation table, Excitation map, cycles, Races, Hazards: Static –Dynamic, Hazards elimination.	04	CO4
5.	MEMORY AND PROGRAMMABLE LOGIC DEVICES Classification of memories, RAM organization, Read/Write operation, Memory cycle, Timing waveforms, Memory decoding, memory expansion, Static RAM Cell, Bipolar RAM cell, MOSFET RAM cell, Dynamic RAM cell, ROM organization, PROM / EPROM / EEPROM / EAPROM Programmable Logic Devices –Programmable Logic Array (PLA), Programmable Array Logic (PAL), Introduction to Complex Programmable Logic Device (CPLD), Field Programmable Gate Arrays (FPGA). Introduction to state machine.	08	CO5
6.	LOGIC FAMILIES Basics of digital integrated circuits, basic operational characteristics and parameters. TTL, Schottky clamped TTL, tri-state gate ECL, IIL, MOS devices CMOS comparison of logic families. PMOS, NMOS and E2 CMOS	04	CO6

Internal Assessment:

Internal Assessment consists of two tests out of which, one should be compulsory class test (on minimum 02 Modules) and the other is either a class test or assignment on live problems or course project.

Theory Examination:

1. Question paper will comprise of 6 questions, each carrying 20 Marks.
2. Total 4 questions need to be solved.
3. Question No. 1 will be compulsory and based on entire syllabus wherein sub questions of 4 to 5 marks will be asked.
4. Remaining questions will be mixed in nature.
5. In question paper weightage of each module will be proportional to number of respective lecture hours as mentioned in the syllabus.

ISC305	Electrical Networks and Measurement	5
Course objectives	<ol style="list-style-type: none"> To introduce the concept of circuit elements lumped circuits, circuit laws and reduction. To study the concept of coupled circuits. To study the transient response of series and parallel A.C. circuits. To study two port model of circuit and circuit elements. To introduce the concept of network synthesis. To study basic analog instruments as well as digital instruments To study the measurement of R-L-C 	
Course Outcomes	<p>Students will be able to -</p> <ol style="list-style-type: none"> Analyze AC and DC circuits using different theorems. Analyze transient and steady-state response of passive electrical networks. Analyze network using poles and zeros and find their parameters like Z, Y, and ABCD. Synthesize the networks using canonical forms. Discuss construction and working principle and applications of analog and digital instruments Measure electrical parameter like R, L, C using electrical bridges. 	

Details of Syllabus:

Prerequisite: Knowledge of DC and AC circuit analysis, Three-phase circuit and transformer.

Module	Contents	Hrs	CO Mapping
1	Networks Theorems Analysis of networks with dependent sources: mesh analysis, nodal analysis, super mesh and super node concept, source transformation technique, superposition theorem, Thevenin's theorem, Norton's theorem, Maximum power transfer theorem. Solution of networks with AC sources, Analysis of coupled circuits (self-inductance, mutual inductance, and dot convention)	12	CO1
2	Time and Frequency response of circuits Voltage/current relations for R, L, C and their equations in time	06	CO2

	domain. Initial and final conditions, first and second order differential equations, steady state and transient response. Analysis of transient and steady state responses using Classical technique		
3	<p>Network Functions: poles and zeros</p> <p>Network functions for one port and two port networks, driving point and transfer functions, ladder network, general network, poles and zeros of network functions, restrictions on Pole and zero locations for driving point functions and Transfer functions, time domain behavior from pole-zero plot.</p> <p>Two-Port parameters</p> <p>Open circuit, Short circuit, transmission and hybrid parameters, relationship between parameter sets, reciprocity and symmetry conditions, parallel connections, parallel connection of two port networks.</p>	08	CO3
4	<p>Fundamentals of Network Synthesis.</p> <p>Causality and stability, Hurwitz polynomials, positive real functions, synthesis of one port networks with two kinds of elements. Properties and synthesis of L-C, R-C, R-L driving point impedances, synthesis of R-L-C functions.</p>	08	CO4
5	<p>Analog & Digital Meters</p> <p>D'Arsonval galvanometers, PMMC and PMMI instruments. Shunts and multipliers, Construction and working principle of: ammeters, voltmeters, ohmmeters, power factor meter, energy meter, Q meters, analog multimeters. Electronic Voltmeters, Digital Voltmeter and digital multimeter. CRO, Measurement of phase and frequency, DSO</p>	08	CO5
6	<p>Measurement of R, L, C</p> <p>Measurement of medium, low and high resistance, Megger. AC bridges, measurement of self and mutual inductances. Measurement of capacitance. Derivations and numerical related to all bridges.</p>	06	CO6

Sr. No.	Tutorials	CO Mapping
1	Examples indicating concept of super mesh and super node.	CO1
2	Examples of indicating the application of Thevenin's and Norton's theorem for circuits with dependent sources.	CO1
3	Examples on evaluating the transient and steady-state conditions for a R-L-C series or parallel connections for different values of resistance.	CO2

4	Examples on evaluating the transient and steady-state conditions for a R-L, R-C circuits for DC conditions.	CO2
5	Examples for finding different parameters of two port networks	CO3
6	Examples on Hurwitz Polynomial. Necessary and sufficient condition for Positive real function.	CO4
7	Examples on realization of R-L, R-C, L-C functions.	CO4
8	Examples on synthesis of R-L-C function.	CO4
9	Testing /measurement of R-L-C using analog/digital multimeter	CO5
10	Applications of CRO (Measurements of phase and frequency).	CO5
511	Study of DVM.	CO5
12	Measurement of medium value resistance using bridge.	CO6
13	Measurement of Inductance using bridge.	CO6
14	Measurement of Capacitance using A.C. Bridges.	CO6

Term Work:

Term work shall consist of minimum three simulations and four tutorials from the above list.

The distribution of marks for term work shall be as follows:

Laboratory work (Tutorials) : 10 Marks

Laboratory work (programs / journal) : 10 Marks

Attendance : 5 Marks

The final certification and acceptance of term work ensures the satisfactory performance of laboratory work and minimum passing in the term work.

Internal Assessment:

Internal Assessment consists of two tests out of which, one should be compulsory class test (on minimum 02 Modules) and the other is either a class test or assignment on live problems or course project.

Theory Examination:

1. Question paper will comprise of 6 questions, each carrying 20 Marks.
2. Total 4 questions need to be solved.
3. Question No. 1 will be compulsory and based on entire syllabus wherein sub questions of 4 to 5 marks will be asked.
4. Remaining questions will be mixed in nature.
5. In question paper weightage of each module will be proportional to number of respective lecture hours as mentioned in the syllabus.

Course Objectives	<ol style="list-style-type: none"> To learn the object-oriented programming concepts To study various java programming constructs like multithreading, exception handling, packages etc. To explain components of GUI based programming 	
Course Outcomes	<p>The students will be able to:</p> <ol style="list-style-type: none"> Apply fundamental programming constructs. Illustrate the concept of packages, classes and objects. Elaborate the concept of strings arrays and vectors. Implement the concept of inheritance and interfaces. Implement the notion of exception handling and multithreading. Develop GUI based application 	

Details of Syllabus:

Prerequisite: Structured Programming Approach

Module	Contents	Hrs	CO Mapping
1	<p>Introduction to Object Oriented Programming</p> <p>OO Concepts: Object, Class, Encapsulation, Abstraction, Inheritance, Polymorphism.</p> <p>Features of Java, JVM</p> <p>Basic Constructs/Notions: Constants, variables and data types, Operators and Expressions, Revision of Branching and looping</p>	02	CO1

2	Classes, Object and Packages Class, Object, Method. Constructor, Static members and methods Passing and returning Objects Method Overloading, Packages in Java, creating user defined packages, access specifiers.	05	CO2
3	Array, String and Vector Arrays, Strings, String Buffer, Wrapper classes, Vector	04	CO3
4	Inheritance and Interface Types of Inheritance, super keyword, Method Overriding, abstract class and abstract method, final keyword, Implementing interfaces, extending interfaces	03	CO4
5	Exception Handling and Multithreading Error vs Exception, try, catch, finally, throw, throws, creating own exception, Thread lifecycle, Thread class methods, creating threads, Synchronization	04	CO5
6	GUI programming in JAVA Applet: Applet life cycle, Creating applets, Graphics class methods, Font and Color class, parameter passing. Event Handling: Event classes and event listener Introduction to AWT: Working with windows, Using AWT controls- push Buttons, Label, Text Fields, Text Area, Check Box and Radio Buttons.	06	CO6

Text books:

1. Ivor Horton, 'Beginning JAVA', Wiley India.
2. Dietal and Dietal, 'Java: How to Program', 8/e, PHI
3. 'JAVA Programming', Black Book, Dreamtech Press.

List of Laboratory Experiments/ Assignments:

Sr. No.	Detailed Contents	CO mapping
1.	Program on various ways to accept data through keyboard and unsigned right shift operator.	CO1
2.	Program on branching, looping, labelled break and labelled continue.	CO1
3.	Program to create class with members and methods, accept and display details for single object.	CO2
4.	Program on constructor and constructor overloading	CO2
5.	Program on method overloading	CO2

6.	Program on passing object as argument and returning object	CO2
7.	Program on creating user defined package	CO2
8.	Program on 1D array	CO3
9.	Program on 2D array	CO3
10.	Program on String	CO3
11.	Program on String Buffer	CO3
12.	Program on Vector	CO3
13.	Program on single and multilevel inheritance (Use super keyword)	CO4
14.	Program on abstract class	CO4
15.	Program on interface demonstrating concept of multiple inheritance	CO4
16.	Program on dynamic method dispatch using base class and interface reference.	CO4
17.	Program to demonstrate try, catch, throw, throws and finally.	CO5
18.	Program to demonstrate user defined exception	CO5
19.	Program on multithreading	CO5
20.	Program on concept of synchronization	CO5
21.	Program on Applet to demonstrate Graphics, Font and Color class.	CO6
22.	Program on passing parameters to applets	CO6
23.	Program to create GUI application without event handling using AWT controls	CO6
24.	Program to create GUI application with event handling using AWT controls	CO6
25.	Mini Project based on content of the syllabus. (Group of 2-3 students)	CO1-CO6

Term Work:

Students will submit term work in the form of journal that will include:

1. At least 20 programs and mini project
2. Two assignments covering whole syllabus
3. Class test based on the above syllabus.

The final certification and acceptance of term work ensures the satisfactory performance of laboratory work and minimum passing in the term work.

The distribution of marks for term work shall be as follows:

Total: 50 Marks (Total Marks) : 20 marks (Experiments),
10 marks (Mini Project),
05 marks (Assignments),
10 marks (Class Test),
05 marks (Attendance)

Practical and oral examination will be based on the suggested experiment list and the entire syllabus.

Subject Code	Subject Name	Credits
ISL302	Analog Electronics Lab Practice	1
Course objective	<ol style="list-style-type: none"> 1. To familiarize the student with assembling circuits using basic electronic devices . 2. To demonstrate operation of diodes, bipolar and MOS transistors, 3. Demonstrate DC biasing circuits, Transistors as switching device, 4. Power circuits and systems. 5. To design and demonstrate Op-amp based circuits for linear and nonlinear applications 	
Course Outcome	<p>Students will be able to</p> <ol style="list-style-type: none"> 1. Demonstrate operation of basic electronic devices such as Diode 2. Demonstrate operation of basic electronic devices BJT, Assemble circuits using BJT AND find frequency response 3. Demonstrate operation of MOSFET. 4. Demonstrate linear applications of operational amplifier. 5. Demonstrate non-linear applications of operational amplifier 6. Design various circuits like regulator. 	

Syllabus: Same as that of Subject ISC302 Analog Electronics.

List of Laboratory Experiments:

Sr. No.	Detailed Content	CO Mapping
1	Clipping and clamping circuits using diode.	CO1
2	Plot input / output characteristics of BJT- CB, CE, and CC Configuration.	CO2
3	Design and analysis of biasing circuit and observing performance of BJT as a amplifier at various operating points.	CO2

4	BJT amplifier frequency response.	CO2
5	Demonstrate BJT as a switch and analysis of circuit	CO2
6	Study of input and transfer characteristics of FET.	CO3
7	FET amplifier frequency response.	CO3
8	Demonstrate use of Op-Amp as inverting and non-inverting amplifier	CO4
9	Clipper and Clamper circuits using Op-amp.	CO5
10	Precision rectifiers using Op-amp	CO5
11	Wein bridge oscillator using Op-amp	CO5
12	Demonstrate integrator and differentiator using Op-amp.	CO4
13	Adder and Subtractor using Op-amp	CO4
14	RC phase shift oscillator using Op-amp	CO5
15	Design and analysis of series regulator	CO6
16	Design and analysis of shunt regulator	CO6

Any other experiment based on syllabus which will help students to understand topic/concept

Practical/Oral Examination:

Practical/Oral examination will be based on entire syllabus.

Term Work:

Term work shall consist of minimum 10 experiments.

The distribution of marks for term work shall be as follows:

Laboratory work (Experiments)	: 10 Marks
Laboratory work (programs / journal)	: 10 Marks
Attendance	: 5 Marks

The final certification and acceptance of term work ensures the satisfactory performance of laboratory work and minimum passing in the term work.

Course Objectives	<ol style="list-style-type: none"> To develop analytical insight of the student to prepare them for graduate's studies in Instrumentation Engineering To enhance their ability to solve and analyse engineering problem. To provide students with a strong mathematical foundation to acquire the professional competence knowledge and skills. 	
Course Outcomes	<p>The students will be able to:</p> <ol style="list-style-type: none"> Check the given set of vectors is the vector space. Find eigenvalues and eigenvectors of matrix and can diagonalize the matrix. Find the probability distribution, expectation, variance and moments for the given data. Use binomial distribution and Poisson distribution and normal distribution for the data for required probability. Apply Cauchy's integral formula and theorem and residue theorem to solve the integral problem. Find the correlation coefficients and rank correlation coefficients and lines regression between the two data. 	

Details of syllabus:

Pre-requisites:

Basics of Complex numbers, Analytic Function, Matrices, Symmetric, Orthogonal and Unitary matrices, Rank, Normal form, Solution of system of linear equations, L. I. & L. D. vectors, Basics of Probability.

Module	Contents	Hrs.	CO mapping
1	Linear Algebra: Vector Spaces Vectors in n-dimensional vector space: properties, dot product, cross product, norm and distance properties in n-dimensional vector space. Vector spaces over real field, properties of vector spaces over real field, subspaces. The Cauchy-Schwarz inequality, Orthogonal Subspaces, Gram-Schmidt process.	06	CO1
2	Linear Algebra: Vector Matrix Theory Characteristic equation, Eigen values and Eigen vectors, properties of Eigen values and Eigen vectors Cayley-Hamilton theorem, examples based on verification of Cayley- Hamilton theorem. Similarity of matrices, Diagonalisation of matrices. Functions of square matrix, derogatory and non-derogatory matrices.	10	CO2
3	Random Variables Discrete & continuous random variables, expectation, Variance, Probability mass function and Density Function, Probability distribution for random variables Moments, Moment Generating Function. Functions of one random variable and their distribution and density functions	10	CO3
4	Probability distribution Probability distribution: Binomial distribution, Poisson & normal distribution (For detailed study)	6	CO4
5	Complex integration Complex Integration: Line Integral, Cauchy's Integral theorem for simply connected regions, Cauchy's Integral formula. Taylor's and Laurent's Series Zeros, singularities, poles of $f(z)$, residues, Cauchy's Residue theorem. Applications of Residue theorem to evaluate real Integrals of different types.	12	CO5
6	Correlation & Regression Karl Pearson's coefficient of correlation, covariance, Spearman's Rank correlation. Lines of Regression.	4	CO6

Course Objectives	<ol style="list-style-type: none"> To make students understand the construction, working principle and application of various transducers used for flow measurement, strain measurement, pressure and vacuum measurement, force, torque and power measurement To study electro-chemical sensors and transducers used for density and viscosity measurement 	
Course Outcomes	<p>The course would enable the students to:</p> <ol style="list-style-type: none"> Explain working principle of strain gauges. Explain working principle of pressure transducers Learn transducers for vacuum measurement. Identify types of flow and use different transducers for flow measurement. Explain the terminologies of electrochemical sensors and their applications in industry. Identify sensors for power, density, humidity, pH measurement. 	

Details of Syllabus:

Prerequisite: Knowledge of basic measurement techniques

Module	Contents	Hrs.	CO mapping
1	Strain Measurement Introduction, types of strain gauge, gauge factor calculation, materials for strain gauge, resistance strain gauge bridges, temperature compensation and applications of strain gauges	04	CO1
2	Pressure Measurement Pressure scales, units and relations, classification Primary pressure sensors - elastic elements like bourdon tube, diaphragm, bellows, properties and selection of elastic materials, Calibration using dead weight tester. Electrical/Secondary Pressure Transducers: Capacitive, piezo-electric and its material, variable reluctance, LVDT, strain gauge. High Pressure Measurement: Bulk modulus cell, Bridgeman type, capsule. Differential pressure measurement: Force balance, motion balance, DP Cell, semiconductor strain gauges.	12	CO2

	Pressure measurement using manometer: U-tube types, well type, inclined type, micro manometer		
3	Vacuum Measurement Units and relations, McLeod gauge, Pirani gauge, thermocouple gauge, hot and cold cathode ionization gauge, Knudsen gauge	04	CO3
4	Flow Measurement Introduction to fluid flow: properties of fluid, types of fluid, dimensionless numbers, types of fluid flow, continuity equation, Bernoulli's equation, hydrostatic law, Pascal's law, flow through pipes – major and minor losses, flow measurement through open channel-weirs and notches. Materials used for flow sensors, performance of materials, corrosion resistors, erosion, effect of vapour pressure Head Type: orifice, venturi, nozzle, pitot tube, annubar, characteristics of head type flow meters. Variable Area Type: Rotameter Velocity and Inertia based flowmeters: Turbine, electromagnetic, ultrasonic, positive displacement, anemometers, mass flow meters, solid flow measurements	16	CO4
5	Electro-chemical Sensors Terminology, equations, units. pH measurement-electrodes, measuring circuits, maintenance, temperature compensation, calibration. Conductivity measurement-probes and measuring circuits	04	CO5
6	Miscellaneous Measurement Force Measurement: strain gauge, LVDT, piezoelectric. Torque: Torsion bar, strain gauge. Power: Dynamometer, instantaneous power measurement, alternator power measurement. Density Measurement – Displacement and float type densitometers Hydrometers, Radiation and Ultrasonic densitometers Viscosity Measurement – Capillary tube viscometer, Efflux type viscometer, Variable area viscometer Introduction to Advances in sensors technology: Smart sensors, MEMS, Nano sensors, Semiconductor sensors, Optical fiber sensors.	08	CO6

Internal Assessment:

Internal Assessment consists of two tests out of which, one should be compulsory class test (on minimum 02 Modules) and the other is either a class test or assignment on live problems or course project.

Theory Examination:

1. Question paper will comprise of 6 questions, each carrying 20 Marks.
2. Total 4 questions need to be solved.
3. Question No. 1 will be compulsory and based on entire syllabus wherein sub questions of 4 to 5 marks will be asked.
4. Remaining questions will be mixed in nature.

5. In question paper weightage of each module will be proportional to number of respective lecture hours as mentioned in the syllabus.

Text Books:

1. Nakra B.C., Chaudhary K.K., Instrumentation Measurement and Analysis, Tata Mc Graw Hill.
2. Sawhney A.K., Electrical and Electronic Measurement and Instrumentation, Dhanpatrai And Co.
3. Rangan, Mani, Sarma, "Instrumentation Systems and Devices", 2nd ed., Tata Mc Graw Hill.

Reference Books:

1. Doebelin E.D., "Measurement system", Tata Mc Graw Hill., 4th ed, 2003
2. Liptak B.G., "Instrument engineer's handbook – Process measurement and analysis".
3. Douglas M. Considine, "Process Instruments and controls", Handbook, Mc Graw Hill.
4. Curtis Johnson, "Process Control Instrumentation Technology", 8th ed, 2005
5. Andrew Williams, "Applied Instrumentation in process industry", Vol-I, Gulf publishing company.
6. Bansal R.K., "Fluid Mechanics and Hydraulic Machines", Laxmi publications.
7. David W. Spitzer, "Industrial Flow Measurement", ISA Publication.
8. Sawhney A.K., "Mechanical Measurement", Dhanpatrai And Co.

ISC403	Feedback Control System	20	20	20	80	-	-	-	100

Subject Code	Subject Name	Credits
ISC403	Feedback Control System	4
Course Objectives	<ol style="list-style-type: none"> The students should be able to learn the type of System, dynamics of physical systems, classification of control system, analysis and design objective. The students should learn how to represent system by transfer function and block diagram reduction method and Mason's gain formula. The students should be able to learn time response analysis and demonstrate their knowledge to frequency response. Students can be able to learn stability analysis of system using Root locus, bode plot, polar plot, and Nyquist plot. 	
Course Outcomes	<p>Students will be able to -</p> <ol style="list-style-type: none"> Identify open and closed loop control system Formulate mathematical model for physical systems. Simplify representation of complex systems using reduction techniques. Use standard test signals to identify performance characteristics of first and second-order systems. Apply root locus technique for stability analysis. Analyze performance characteristics of system using Frequency response methods. 	

Details of Syllabus:

Prerequisite: Knowledge of Laplace and Inverse Laplace Transform.

Module	Contents	Hrs	CO mapping
1	Introduction Definition of control system and related terms, open loop and closed loop system, examples. Development of automatic control systems, classification of control system, examples	4	CO1
2	Mathematical Models of Physical Systems Definition of physical systems, principle of superposition and homogeneity, linear/non-linear, time variant/time invariant systems. Types of dynamic model, linear elements of electrical and mechanical systems, differential equations of physical systems-mechanical systems, electrical systems – RLC series, parallel circuits, Analogous systems.	8	CO2

3	Transfer Function and Feedback Characteristics Definition of transfer function, sinusoidal transfer function, transfer functions of physical systems, block diagram algebra, reduction rules, signal flow graphs-definition, construction, properties, and Mason's gain formula, sensitivity of closed loop and open loop systems, effect of feedback, effect of disturbances signals, regenerative feedback with examples	10	CO3
4	Time Response Analysis Standard test signals, pulse and impulse function, step function, ramp function, parabolic function, sinusoidal function, dynamic response, time response of first order system, time response of second order system, specifications, steady –state error, system types and error constants, design specifications of second order system-desired closed loop pole location and the dominant closed loop pole concept. Time response analysis of electrical RLC circuits – first and second order differential equations, steady-state, and transient response by using Laplace transform.	10	CO4
5	Stability Analysis and Root Locus Method Concept of stability, definitions, bounded input-bounded output stability, relative stability, necessary and sufficient conditions for stability, Routh's stability criterion, relative stability analysis, root locus technique, applications, concept, construction of root loci, root loci of different systems, electrical RLC circuits, etc.	08	CO5
6	Frequency Response and Stability Analysis Correlation between time and frequency response, polar plots, Bode plots, Nyquist stability criterion, frequency response specifications, stability analysis using-bode plots, polar plots, definition and significance of gain margin and phase margin, sensitivity analysis in frequency domain, Frequency response and analysis of electrical RLC circuits.	08	CO6

Internal Assessment:

Internal Assessment consists of two tests out of which, one should be compulsory class test (on minimum 02 Modules) and the other is either a class test or assignment on live problems or course project.

Theory Examination:

- 1) Question paper will comprise of 6 questions, each carrying 20 Marks.
- 2) Total 4 questions need to be solved.
- 3) Question No. 1 will be compulsory and based on entire syllabus wherein sub questions of 4 to 5 marks will be asked.
- 4) Remaining questions will be mixed in nature.
- 5) In question paper weightage of each module will be proportional to number of respective lecture hours as mentioned in the syllabus.

ISC404	Analytical Instrumentation	20	20	20	80	-	-	-	100

Subject Code	Subject Name	Credits
ISC404	Analytical Instrumentation	3
Course Objectives	1. Introduce the basic concept of qualitative and quantitative analysis of a given sample. 2. Study various spectroscopic techniques and its instrumentation. 3. Study the concept of separation science and its applications. 4. Study the concept of radiochemical analysis along with industrial analyzers.	
Course Outcomes	The students will be able to: <ol style="list-style-type: none"> 1) Define and explain various fundamentals of spectroscopy, qualitative and quantitative analysis. 2) Discuss the terms, principle, instrumentation, operation and applications of Molecular spectroscopic techniques. 3) Differentiate between principle, instrumentation and operation of Atomic absorption and emission Spectroscopy. 4) Explain the various Separation techniques and its instrumentation. 5) Describe the principle and working of various Radiation detectors. 6) Discuss the principle and working of various Gas analyzers. 	

Details of Syllabus:

Prerequisite: Knowledge of sensors and analog electronic circuits.

Module	Contents	Hrs	CO Mapping

1	<p>Introduction: Introduction to analytical Instrumentation. Compare classical analytical techniques with instrumental techniques.</p> <p>Fundamentals of Spectroscopy: Nature of Electromagnetic Radiation, Electromagnetic spectrum, Beer Lambert's Law statement and derivation. Deviations from Beer's law. Numerical on EMR and laws of photometry.</p> <p>Interaction of radiation with matter. Instrumentation of spectroscopic analytical system – Radiation sources, Wavelength selectors, Detectors, signal processors and readout modules.</p>	06	CO1
2	<p>Molecular Spectroscopy: Molecular Energy levels, correlation of energy levels with transitions.</p> <p>Electronic transitions and Vibrational transitions – Introduction to UV-VIS molecular spectroscopy – basics of single beam, double beam spectrophotometer and filter photometer, its instrumentation and applications.</p> <p>Basic principle of Fluorescence, Phosphorescence and Raman Spectroscopy, components and instrumentation of Fluorimeters, Phosphorimeters and Raman spectrometers.</p> <p>Nuclear/Rotational transitions – Nuclear Magnetic Resonance (NMR) spectroscopy, basic principle and numerical problems based on NMR principle, instrumentation and constructional details of NMR Spectrometer.</p> <p>Electron Spin Resonance (ESR) Spectroscopy – Basic principle and construction of ESR spectrometer.</p>	10	CO2
3	<p>Atomic Spectroscopy: Atomic Energy levels, Atomic absorption spectrometers- components, working and absorption spectra.</p> <p>Atomic Emission spectrometers – components, working and emission spectra, comparison between AAS and AES.</p>	03	CO3
4	<p>Separation Science:</p> <p>Chromatography: Fundamentals of chromatographic Separations, Classification, Gas chromatographic system with components, factors affecting separation, applications. Analysis of Gas Chromatogram.</p> <p>HPLC – Its principle and instrumentation.</p> <p>Mass Spectrometers: Basic principle, components and types of mass spectrometers, sample handling techniques for liquids and solids, resolution and numerical problems based on resolution. Interfacing Gas Chromatography and Mass spectrometry (GCMS).</p>	09	CO4
5	<p>Radio Chemical Instrumentation:</p> <p>Basics of Radioactivity, properties of radiations (α, β, γ). Half-life period and numerical problems based on half-life period.</p> <p>Radiation detectors – Ionization chamber, Proportional counter, Geiger Muller counter, Scintillation detector, Semiconductor detectors, Pulse height analyzers.</p>	05	CO5

6	Industrial Gas Analyzers: Oxygen, Carbon dioxide(CO ₂), Carbon monoxide(CO) and NO ₂ analyzers, Gas density analyzer.	03	CO6
---	--	----	-----

Internal Assessment:

Internal Assessment consists of two tests out of which, one should be compulsory class test (on minimum 02 Modules) and the other is either a class test or assignment on live problems or course project.

End Semester Theory Examination:

1. Question paper will comprise of 6 questions, each carrying 20 Marks.
2. Total 4 questions need to be solved.
3. Question No. 1 will be compulsory and based on entire syllabus wherein sub questions will be of 4 to 5 marks.
4. Remaining questions will be mixed in nature.
5. In question paper weightage of each module will be proportional to the number of respective lecture hours as mentioned in the syllabus.

Subject Code	Subject Name	Credits
ISC405	Signal Conditioning Circuit Design	4
Course objectives	<ol style="list-style-type: none"> To give the knowledge about the various components analog signal conditioning. To impart knowledge of design considerations of analog signal conditioning of components. To give the students knowledge about various components digital signal conditioning. To make the students capable to apply knowledge to design various transducer signal conditioning circuits To give the students knowledge about the adjustable power supply design 	
Course Outcomes	<p>The students will be able to:</p> <ol style="list-style-type: none"> Explain principle of analog signal conditioning circuits Design analog signal conditioners Design digital signal conditioners Apply knowledge of signal conditioning circuits to design temperature and pressure transducers signal conditioning Apply knowledge of signal conditioning circuits to design optical and miscellaneous transducers signal conditioning Apply knowledge to design different power supplies. 	

Details of Syllabus:

Prerequisite: Knowledge of various sensors and basic electronics.

Module	Contents	Hrs	CO mapping
1	Principles of Analog Signal Conditioning: Standard analog signals, Signal Level and bias changes, Linearization, signal conversion, filtering and impedance matching, concept of loading. Passive circuits – Divider Circuits, Bridge circuits (Current, Voltage, Balanced and Unbalanced), RC filters	06	CO1
2	Analog signal conditioners and their design Practical applications of Op amp based circuits with design:	12	CO2

	Differentiators, Integrator, Instrumentation amplifier using 3 op amps Half wave, full wave milivolt rectification, absolute value circuit, Log and antilog amplifier with temperature compensation, active filters, threshold detector, zero crossing detector, window detector, Phase locked loops (PLL), Voltage to Current converter and Current to Voltage Converter, 555 Timer: modes of operation with applications. Guidelines for analog signal conditioning design and design based problems		
3	Components of Digital Signal Conditioning: Block diagram of Digital signal conditioning, Characteristics of digital data: digitized value, sampled data system and linearization, sample and hold circuit, peak detector, ADC (Successive Approximation, Flash, Ramp, dual slope) and DAC (R/2R, Weighted resistors) their types and specifications, V to F and F to V converters.	10	CO3
4	Thermal and Pressure Transducers Signal Conditioning Design: Thermal sensor signal conditioning, design considerations and application for RTD, Thermistor, thermocouple and solid state temperature sensor. Pressure Transducer signal conditioning Design: design considerations and applications for various pressure sensors.	8	CO4
5	Optical and Other Transducer Signal Conditioning Design: Optical Sensor signal conditioning - photo-diode with photo-conducting and photovoltaic modes, photo-transistor and photomultiplier tube. Optical encoder signal conditioning for linear displacement, velocity and angular displacement applications. Other sensor signal conditioning: Potentiometer, LVDT, strain gauges, piezoelectric and capacitive transducers	6	CO5
6	Power Supply Design: Power supply design using 78xx series, 79xx series and adjustable voltage IC regulators like 723 and LM317. Switched Mode Power Supply (SMPS): Block diagram with advantages and disadvantages over conventional power supply.	6	CO6

Internal Assessment:

Internal Assessment consists of two tests out of which, one should be compulsory class test (on minimum 02 Modules) and the other is either a class test or assignment on live problems or course project.

Theory Examination:

1. Question paper will comprise of 6 questions, each carrying 20 Marks.

Course objectives	To study graphical programming language for creating simulation and custom applications that interact with real-world data or signals in fields of science and engineering.	
Course Outcomes	<p>Students will be able to</p> <ol style="list-style-type: none"> 1. Design logical operations, using Graphical programming language 2. Develop customized virtual instruments and represent them in required format with user friendly graphical programming software for LOOPS like FOR LOOP, WHILE LOOP etc. 3. Discuss Global variable, sequence structure etc. 4. Explain Visa programming 5. Discuss concepts of hardware used 6. Use the data acquisition card or simulated software module and make user interface in the field of engineering. 	

Details of Syllabus:

Prerequisite: Knowledge of Mathematics and conversion, LOOPS, switch CASE of any other software like C program, simple concept of proportional process.

Module	Contents	Hrs	CO mapping
1	Graphical Programming Software basics: Components of virtual instrument, creating virtual files and sub-files, data types, debugging techniques.	03	CO1
2	Structures- FOR, WHILE, Case structure, Timing, formula nodes and math script, loops- shift registers Auto-indexing concept, feedback nodes. Arrays and clusters, Strings, File I/O.	07	CO2
3	Sequence structure -Local and global variables, Express virtual files	02	CO3
4	VISA programming, Understanding simple concepts of control using PID block, Plotting data -- graphs and charts,	06	CO4

5	Introduction to terms: Measurement system, sampling, calibration, measurement hardware- configuration.	02	CO5
6	Data Acquisition cards, Graphical Programming Software modules and tool sets, general applications of Graphical Programming Software.	04	CO6

List of Laboratory Experiments:

Sr. No.	Detailed Contents	CO mapping
1	To develop a VI to calculate speed, convert degree celcius to Fahrenheit	CO1
2	To develop a Sub VI to Perform Half adder and implement Full ADDER using Sub-VI	CO1
3	To develop VI using FOR and WHILE loop to add 10 numbers, calculate Factorial of a given number	CO2
4	To create VI to find roots of quadratic equation, user defined unit conversions etc using case structure.	CO2
5	To create VI student database using String control and Array and cluster functions.	CO2
6	To develop a VI for storing all the points of simulated signal using File I/Os	CO1
7	To create VI to simulate traffic light control, stirred tank heater etc. using Sequence structure	CO3
8	To create VI to simulate bottle filling plant using Sequence structure.	CO3
9	Build a VI to plot circle in XY graph, generate and plot random numbers on chart, different colors in an intensity graph etc with graph, chart properties and options.	CO4
10	Applications of Graphical Programming Software in digital electronics—binary to decimal conversion etc.	CO1,CO2
11	Applications of Graphical Programming Software in control — simulate first and second order system response, effect of damping factor etc.	CO4
12	Applications of Graphical Programming Software in process —tank level/temperature control, alarm annunciator, batch process control etc.	CO5
13	Measurement of AC/ DC voltage and current using DAQ cards.	CO6
14	Any one Mini project based on the above syllabus	CO1 -CO6

Note:

Any other experiments based on syllabus which will help students to understand topic/concept can also be included.

For this course use Graphical Programming Software like Lab View or Open Source Software

Term Work:

Term work shall consist of minimum 10 programs from the list of suggested programs and one Mini-project of your choice or from the list given above.

The distribution of marks for term work shall be as follows:

Laboratory work (Performing Experiments)	: 20 Marks
Laboratory work (programs/ journal)	: 10 Marks
Mini Project	: 15 Marks
Marks Attendance	: 5 Marks

The final certification and acceptance of term work ensures the satisfactory performance of laboratory work and minimum passing in the term work.

Practical /oral Examination:

Practical/Oral examination will be based on entire syllabus.

Reference Books:

1. Robert Bishop, “Learning with LabVIEW™ 7 express”, Pearson Education, 2005.
2. Jovitha Jerome, “Virtual Instrumentation”, PHI, 2010.
3. Gupta S, “Virtual Instrumentation Using LabVIEW”, Tata McGraw Hill Publishing Company Limited.
4. LabVIEW users manual.
5. National instruments Product catalog.

Course Objectives	<ol style="list-style-type: none"> To make students understand the construction, working principle and application of various transducers used for flow measurement, strain measurement, pressure. To study electro-chemical sensors and transducers used for density and viscosity measurement To experimentally verify the principle and characteristics of various transducers 	
Course Outcomes	<p>Students will be able to -</p> <ol style="list-style-type: none"> Explain working principle of transducers used for strain measurement. Explain working principle of transducers used pressure measurement. Identify constant head type flow sensors such as orifice, venturi, tube, nozzle and pitot tube and study the applications. Identify variable area and electromagnetic flow meters Demonstrate the performance characteristics of various electrochemical sensors Use miscellaneous sensors for density and viscosity measurement. 	

Syllabus same as that of subject ISC402 Transducers-II

List of Laboratory Experiments:

Sr. No.	Detailed Contents	CO mapping
1.	Strain gauge characteristics and weight measurement	CO1
2.	Study use of semiconductor strain gauges for pressure measurement	CO2
3.	Study measurement of pressure using bellows, diaphragm, bourdon tube, manometer.	CO2
4.	Test and calibration of pressure gauges using dead weight tester.	CO2
5.	Measurement of flow using orifice/venturi tube/nozzle/pitot tube.	CO3
6.	Measurement of flow using rotameter.	CO4

7.	Measurement of flow using electromagnetic flow meter.	CO4
8.	Study and characterization of pH meter.	CO5
9.	Study and characterization of conductivity meter.	CO5
10.	Measurement of Density	CO6
11.	Viscosity measurement	CO6

Any other experiments based on syllabus which will help students to understand topic/concept.

Term Work:

Term work shall consist of minimum eight experiments.

The distribution of marks for term work shall be as follows:

Laboratory work (Experiments)	: 10 Marks
Laboratory work (programs/ journal)	: 10
Marks Attendance	: 5 Marks

The final certification and acceptance of term work ensures the satisfactory performance of laboratory work and minimum passing in the term work.

Practical /oral Examination:

Practical/Oral examination will be based on entire syllabus.

Course objectives	<ol style="list-style-type: none"> The students should be able to examine steady-state and frequency response of the Type 0, 1, and 2 systems. The students should be able to examine steady-state and frequency response of first and second order electrical systems. The students should be able to examine time response analysis of first and second order systems. Students can be able to inspect stability analysis of system using Root locus, Bode plot, polar plot. 	
Course Outcomes	<p>Students will be able to -</p> <ol style="list-style-type: none"> Plot frequency response of first-order electrical system. Plot time response of second-order electrical system and calculate the steady-state error. Demonstrate their knowledge to obtain the transfer function and transient and steady-state response to test signals such as step, ramp, and parabolic. Understand the effect of damping factor on system response. Inspect the time response specifications of systems by using root-locus. Inspect the frequency response specifications of systems by using bode-plot, Polar plot, Nyquist-plot techniques, and comment on the stability of system 	

Syllabus same as that of subject ISC403 Feedback Control systems

List of Laboratory Experiments:

Sr. No.	Detailed Contents	CO mapping
1	To plot the effect of time constant on first – order systems response.	CO1
2	To plot the frequency response of first-order system	CO1
3	To plot the time response of second – order systems.	CO2
4	To examine steady state errors for Type 0, 1, 2 systems	CO3
5	To study the block diagram reduction technique by using simulation software.	CO3
6	To interpret the effect of damping factor on the performance of second order system.	CO4

7	To inspect the relative stability of systems by Root-Locus using Simulation Software	CO5
8	To inspect the stability of systems by Bode plot using Simulation Software	CO6
9	To determine the frequency response specifications from Polar plot of system	CO6
10	To inspect the stability of systems by Nyquist plot using Simulation Software	CO6

Any other experiments based on syllabus which will help students to understand topic/concept.

Note: Sr. 1 to 4 experiments should be performed using practical kit /bread-board and Sr. 5 to 10 by using simulation software like MATH CAD/MATLAB/SCILAB/OCTAVE or equivalent.

Term Work:

Term work shall consist of Eight experiments.

The distribution of marks for term work shall be as follows:

Laboratory work (Experiments) : 10 Marks

Laboratory work (programs /journal) : 10 Marks

Attendance : 5 Marks

The final certification and acceptance of term work ensures the satisfactory performance of laboratory work and minimum passing in the term work.

Oral Examination:

Oral examination will be based on entire syllabus.

Subject Code	Subject Name	Teaching Scheme (Hrs.)			Credits Assigned

Subject Code	Subject Name	Credits
ISL404	Analytical Instrumentation Lab Practice	1
Course Objectives	1. To make students perform experiments to understand concept and working of various Analytical Instruments. 2. To develop skills in analyzing the sample using various spectroscopic techniques.	
Course Outcomes	The students will be able to: 1) Illustrate the concept and working of various spectrometers using different samples. 2) Analyze the given sample in qualitative and quantitative manner, using spectral techniques. 3) Use specific techniques employed for monitoring different pollutants in air and water. 4) Demonstrate the working of various radiation detectors. 5) Experiment the working of instruments used for clinical analysis, and pharmaceutical laboratories. 6) Illustrate the concept of separation science.	

Syllabus: Same as that of Subject ISC404 Analytical Instrumentation.

List of Laboratory Experiments / Assignments:

Sr. No.	Detailed Content	CO Mapping
1.	To calculate the refractive index of a given sample using Refractometer.	CO1
2.	To examine the optical density of a given sample using Photoelectric Colorimeter.	CO2

3.	To identify the optical density of a given sample using Balance cell Colorimeter.	CO2
4.	To determine the absorbance and transmittances of a given sample using Single/double beam UV/VIS spectrometer.	CO2
5.	To examine the optical density of given electrophoresis strip using Densitometer.	CO1
6.	To identify the turbidity of given sample using Nephalo-turbidity meter.	CO3
7.	To determine the pH of a given solution using pH meter.	CO5
8.	To determine the conductivity of a given sample using conductivity meter.	CO5
9.	To determine the Na and K concentration in a given sample using Flame Photometer	CO1
10.	To examine the fluorescence phenomenon using Photo-fluorimeter.	CO1
11.	To demonstrate the radioactive radiations using Geiger Muller counter and Scintillation counter.	CO4
12.	To demonstrate the working of Gas chromatograph.	CO6

Any other experiment based on syllabus which will help students to understand topic/concept.

Note:

1. Minimum of eight experiments and two assignments can be performed during the semester for term work and oral examination.
2. Industry visit is advised to understand the concept of Analytical Instrumentation subject.

Practical/Oral Examination:

Oral examination will be based on entire syllabus.

Term work:

Term work shall consist of minimum 08 experiments from the above given list and 02 assignments on the entire syllabus.

The distribution of marks for term work shall be as follows:

Laboratory work (Experiments) : 10 Marks
 Two Assignments and viva on practicals : 10 Marks
 Attendance : 5 Marks

The final certification and acceptance of term work ensures the satisfactory performance of laboratory work and minimum passing in the term work.

		Internal Assessment				Term work	Pract. and Oral	Oral	Total
		Test 1	Test2	Avg.	End semExam				
ISL405	Signal Conditioning Circuit Design Lab Practice	-	-	-	-	25	25	-	50

Subject Code	Subject Name	credits
ISL405	Signal Conditioning Circuit Design Lab Practice	1
Course objectives	<ol style="list-style-type: none"> To give the knowledge about the various components analog signal conditioning. To impart knowledge of design considerations of analog signal conditioning of components. To give the students knowledge about various components digital signal conditioning. To make the students capable to apply knowledge to design various transducer signal conditioning circuits To give the students knowledge about the adjustable power supply design 	
Course Outcomes	<p>The students will be able to</p> <ol style="list-style-type: none"> Explain working principle of signal conditioning circuits Discuss the design considerations of analog signal conditioners used in transducer signal conditioning. Discuss the design considerations of various digital signal conditioners used in transducer signal conditioning. Apply knowledge of signal conditioning circuits to design temperature and pressure transducers signal conditioning Apply knowledge of signal conditioning circuits to design optical and miscellaneous transducers signal conditioning Apply knowledge to design different power supply. 	

Syllabus: same as that of subject ISC405 Signal Conditioning Circuit Design

List of Laboratory Experiments:

Sr. No.	Detailed Content	CO Mapping
1	Demonstrate non-inverting buffer amplifier circuit	CO1

2	Design and demonstrate general signal conditioning circuit to convert sensor output to 0-5 V	CO2
3	Design and demonstrate general signal conditioning circuit to convert sensor output to 4-20 mA	CO2
4	Design and demonstrate signal conditioning circuit for low level signals in micro-volts' region	CO2, CO4
5	Design and demonstrate absolute value circuit for an application	CO2
6	Design and demonstrate signal conditioning circuit for weight measuring system using strain gauge	CO5
7	Design and demonstrate signal conditioning circuit for capacitive transducer	CO5
8	Design and demonstrate second order LPF and HPF for any application	CO2
9	Design signal conditioning circuit for RTD	CO4, CO2
10	Design signal conditioning circuit for optical sensor.	CO2, CO5
11	Design and demonstrate digital to Analog converter circuit	CO3
12	Design and demonstrate I to V and V to I converter circuit	CO2
13	Design and implement Astable and Monostable Multivibrator using IC 555.	CO3
14	Design adjustable voltage regulators using IC723/ LM317	CO6

Any other experiments based on syllabus which will help students to understand topic/ concept.

Term Work:

Term work shall consist of minimum eight experiments.

The distribution of marks for term work shall be as follows:

Laboratory work (Experiments)	: 10 Marks
Laboratory work (programs / journal)	: 10 Marks
Attendance	: 5 Marks

The final certification and acceptance of term work ensures the satisfactory performance of Laboratory work and minimum passing in the term work.

Practical/Oral Examination:

Practical/Oral examination will be based on entire syllabus.

Total		320	80	175	125	-	700

Department Level Optional Courses:

Subject Code	Subject Name
ISDLO5011	Advanced Sensors
ISDLO5012	Optimization Techniques
ISDLO5013	Database Management System
ISDLO5014	Fiber Optic Instrumentation

Subject Code	Subject Name
ISDLO6021	Material Science
ISDLO6022	Computer Organization and Architecture
ISDLO6023	Bio-sensors and Signal Processing
ISDLO6024	Nuclear Instrumentation

Subject Code	Subject Name
ISDLO7031	Image Processing
ISDLO7032	Digital Control System
ISDLO7033	Advanced Microcontroller Systems
ISDLO7034	Mechatronics
ISDLO7035	Building Automation

Subject Code	Subject Name
ISDLO8041	Expert System
ISDLO8042	Optimal Control System
ISDLO8043	Internet of Things(IOT)
ISDLO8044	Power Plant Instrumentation
ISDLO8045	Functional Safety

Institute Level Optional Courses

Subject Code	Institute level Optional Course - I
ILO7011	Product Lifecycle Management
ILO7012	Reliability Engineering
ILO7013	Management Information System
ILO7014	Design of Experiments
ILO7015	Operation Research
ILO7016	Cyber Security and Laws
ILO7017	Disaster Management and Mitigation Measures
ILO7018	Energy Audit and Management
ILO7019	Development Engineering

Subject Code	Institute level Optional Course - II
ILO8021	Project Management
ILO8022	Finance Management
ILO8023	Entrepreneurship Development and Management
ILO8024	Human Resource Management
ILO8025	Professional Ethics and Corporate Social Responsibility (CSR)
ILO8026	Research Methodology
ILO8027	IPR and Patenting
ILO8028	Digital Business Management
ILO8029	Environmental Management
